

Using web for making life easier

Nowadays we use most of the time of our life in a web browser. So why not use to it to make our life easier.

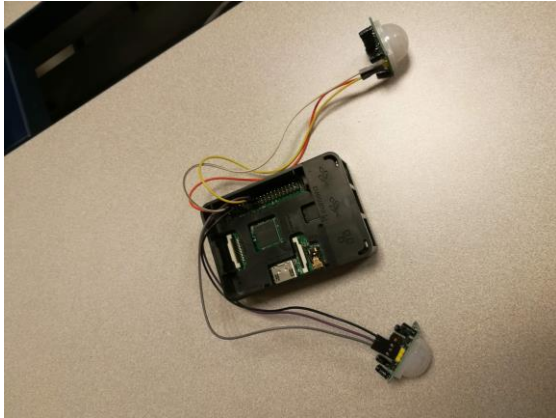

Web-based Room Occupancy Checker can help to see the status of any premise remotely from a web page in your browser.

Web-based Room Occupancy Checker

Using modern technology to make life easier

Sensor based technology

A simple PIR motion sensor and a Raspberry Pi is used to check status of a room real-time remotely using web technology.

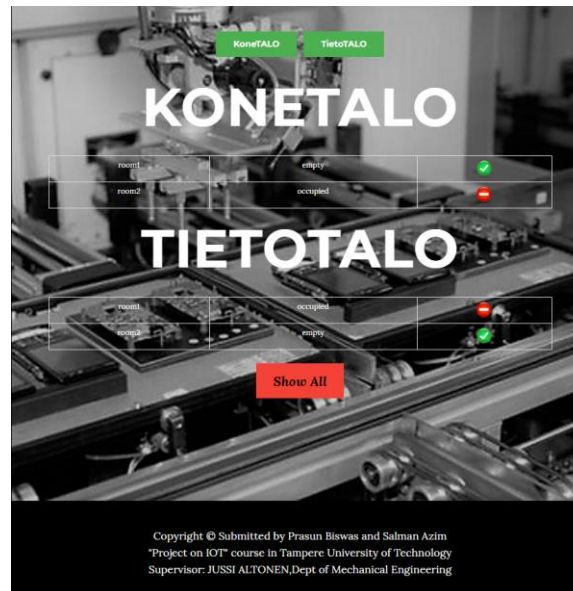

Customize in Almost No Time

More interesting and useful features can be added as need of the client. Log In options and room booking options for example. Customizable solution for everyone. Take it as you like it.

"When you have the opportunity to do better, why waste your time."
-Anonymous

Basic Layout

The basic web page with the room status of two rooms from Konetalo and Tietotalo. More rooms and features can be added, and the page can be beautified as your requirements.
